

What happens when 20 years of experience turns to liquid.

Impressive would be a good way to describe it. Engel's experience in liquid silicone rubber (LSR) injection molding dates back to 1979 – the year we sold our first LSR machine.

And that machine is still running. It's no surprise then that we have more LSR equipment on the market than any other supplier.

From the beginning, Engel has been helping molders take advantage of LSR's opportunities. Opportunities in automotive, medical and computer manufacturing – to name a few. We'll help you figure out the most efficient

way to mold the LSR parts you need, and get you up and running faster than anyone else.

At Engel, we're the only machine manufacturer with dedicated LSR technology. Not only can we provide you with standard LSR solutions, we've also been successful in combining LSR with other processes like co-injection, multi-material, gas-assisted and insert molding – bringing even more molding opportunities to life.

When you decide on liquid silicone rubber molding, make the solid choice. With specialized equipment for specialized markets, we have the

expertise to help you run a successful LSR application today – and lead your business to new opportunities over the next 20 years.
